

ABSTRACT OF THE DISCLOSURE

A flexible polyurethane foam is obtained by mixing a raw material containing a hydroxyl compound, a polyisocyanate, a foaming agent, a foam stabilizer, and catalyst, and foaming the  
5 mixture. The flexible polyurethane foam has a molar ratio of urea bond relative to urethane bond of 7 or less and more than 0.2, and the hydroxyl compound contains 100 parts by weight of polyether polyol and 0.5-20 parts by weight of a low-molecular weight hydroxyl compound having a molecular weight lower than  
10 that of the polyether polyol.
